## High Attack Resisting Display Cases Requirement specification for display cases

Attachment: High Attack Resisting Display Cases

- As a minimum the glass should comply with European standard EN 356 P6B.
- The case to be steel framed with flanged corners to hold the glass in place. These flanges should have at least 20mm overlap round the glass to prevent a levering attack on the corners of case.
- Unglazed sides to the case will need to be of steel.
- The case to be secured with high standard locks tested according to European standard EN 1303 Grade 6. Generally at least two locks should be fitted to each opening in the case. Locks should be concealed and protected from direct attack. Locks should also be fitted with alarm (electromechanical switch) to monitor the locking system.
- Hinges should be concealed and thereby protected from direct attack. However, if they are
  exposed they need to be supported by steel hinge bolts and resistant to attack through the
  hinge pins being driven out.
- As a minimum the display cases must be fitted with
  - o magnetic switch to monitor the display case door/ lid
  - o tremor detector to monitor the display case for forced violence
- Lighting to be housed in a separate light box compartment secured by different locks to the
  main display section which will enable the lighting system to be maintained without opening the
  display section. The case to be constructed to prevent access to the collection material via the
  light box compartment.
- Similarly if the case is built over a storage compartment this should be secured separately with the case constructed to prevent access to the collection material via the storage compartment.
- The display case must be well sealed to protect exhibits on display from any changes in the
  exhibition area climate. The case must be designed to keep variations in temperature and/or
  humidity to an absolute minimum. Conditioning material used to stabilize humidity should be
  placed in a storage compartment with a ventilation route into the body of the case.
- All materials used must meet conservation specifications.
